

Poster Description

Our audience:

The state government business intelligence who seek to optimize operations at high cancellation percentage airports. We will present the graphics in a report to suggest where there may be a problem to explore.

Why we present this?

High cancellation percentage airports may be an inconvenience to passengers. Airport operations should highly consider this factor and optimize operations to reduce such cancellations. The report is focused on the airports with high cancellations percentages (number of cancelled flights divided by the number of departures). It will take an interesting approach by looking in to the time of cancellation (month and week) and identify if there is a problem through these aspects through observation analysis. ACI aims to bring a high standard flying experience for every passenger around the world.

What is the basic message that you are trying to convey?

Airports should improve operations on certain days of the week and months of the year, along with monitoring short distance flights.
